

EXAMPLE FOR TABLE

(Font: Times New Roman 10 pts, footnotes 9 pts, Italic and Lines and other details as in the example)

Table 1 - Comparisons of Rorschach ErlebnisTypus categories in the subgroups of the sample, and results of the Loglinear Analysis (Factors: presence or absence of Intellectual Disability and diagnosis of schizophrenia or depression)

ERLEBNIS- TYPUS ⁽¹⁾	Intellectual Disability				No disability			
	Schizophrenia		Depression		Schizophrenia		Depression	
	N	%	N	%	N	%	N	%
Introversive	5	21.74	15	65.22	3	11.54	2	8.00
Ambitent	2	8.70	3	13.04	12	46.15	16	64.00
Extratensive	16	69.57	5	21.74	11	42.31	7	28.00

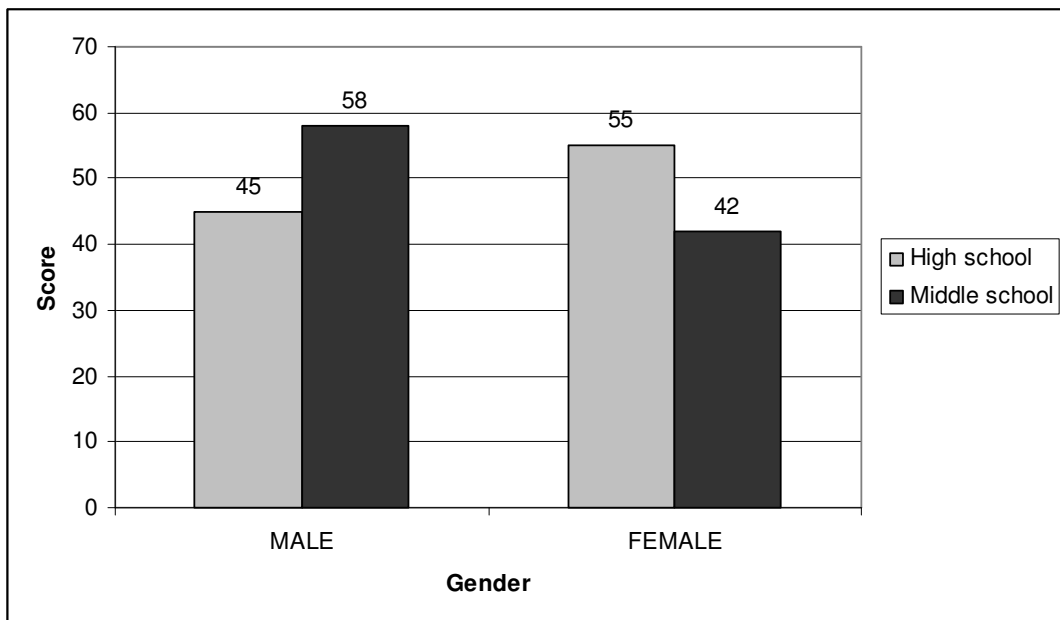

$\chi^2_6 42.02; p < .01$

Loglinear analysis significant effects: Intellectual Disability ($p < .001$); diagnosis ($p < .01$); interaction ($p < .05$)

Note (1) Introversive if ($M - WSumC$) > 1.5, Ambitent if ($M - WSumC$) +1.5 to -1.5, Extratensive if ($WSumC - M$) > 1.5.

EXAMPLE FOR GRAPHIC (1) - caption outside the figure

Figure 1 - Comparison of gender scores in High versus Middle Schools

Editing notes:

Font: Times New Roman, normal, 10 pts. - Legend: on the right

Background: white, no color – Bars: gray shade, or black & white filling, not colors.

Values on each bar: optional.

Also horizontal bars may be accepted, with labels on the left.
