

## **The young-simpson syndrome: a case report.**

*Adalgisa Natalia, Serafino Buono<sup>1</sup>, Maria Teresa Amata,<sup>2</sup> Michelangelo Ferrara<sup>3</sup>, Donatella Greco<sup>4</sup>*

The Young-Simpson Syndrome is characterized by multiple malformations and unknown etiology, and is associated with Mental Retardation. It's a rare syndrome and, indeed, only 11 cases have been so far identified. The evolution of cognitive, adaptive and behavioral characteristics is still unclear.

This paper describes a clinical case that, following target-oriented habilitation treatments, showed remarkable improvements in several developmental domains.
